Set up and configure LAN (Local area network) using a Switch and 4 Ethernet cables in your lab

What is a LAN?

A Local Area Network (LAN) refers to a network that connect device within a limited area, Such as an office building, School or home It enable users to Share resource, including, data Printer and internet aces. LAN connect devices to Promote collaboration and transfer information between user Such as computer, Printer Servers and Switches.

How to set up a LAN

Step 1. Plan and Design an appropriate network topology taking into account network requirement and equipment location

Step 2: you can take 4 computer, a switch with 8, 16, or 24 Ports which is sufficient for networks of there size and 4 Ethernet cable into your computer and the other end and into your network Switch

Step 4:

Assign IP address to your PCs

log on to the client computer as Administrator or as Owner

Click Network and Internet connection

Right click local Area connection/ Ethernet -> Go to properties -> Select Internet Protocal (TCP/IPV4) -> Click on properties -> Select use the folling ip address option and assign ip address option and assign ip address.

Step 5: configure a network switch

Step 6: check the connectivity between switch and other machine by using ping command in the command prompt of the device

Step 7: Select a folder -> go to properties -> click Sharing tab -> Share it with everyone on the Same LAN

Result:

This lan is Setted up and connection is verified Successfully
