Exp: 14 Write a code using RAW Socket Socket to implement packet Sniffing

```
from scapy.all import Sniff
from Scapy.layers.inet import IP, TCP, UDP, ICMP

def Packet_callback(packet):
    if IP in packet:
        ip_layer = packet[IP]
        Protocol = ip_layer.proto
        Src_ip = ip_layer.src
        dst_ip = ip_layer.dst

        if
        Protocol_name = ""
        if Protocol == 1
            Protocol_name = "ICMP"
        elif protocol == 6
            Protocol_name = "ICP"
        elif Protocol == 19
            Protocol_name = "UDP"
```

```
        else:
            Protocol_name = "Unknown Protocol"

        Print (f"Protocol: {Protocol_name}")
        Print (f"Source IP: {src_ip}")
        Print (f"Destination IP {dsp_ip}")
        Print ("-";*50)

Sniff (iface = "Wi-Fi", Prn = packet_callback,
    filter = "ip", Store = 0)
```

Out Put-

Protocol : TCP

Source : 57.155.141.117

Destination: 192.168.1.6

Protocol : TCP

Source : 192.168.1.6

Destination. 57.155.141.117

Result:

Therefore, the RAW Sockets to implement Packet Sniffer executed Successfully
